StayConnected SYSTEMS

New Build Connectivity

A single source solution for small to medium sized Housing Developers

We have dedicated servers in the heart of London's IT District and we install leased lines to housing developers around the country.

We specialise in delivering Gigabit and 'next fastest connection' to meet the December 2022 Government regulations.

Our leased line prices should be compared with BT and Openreach costs to demonstrate our competitiveness.

Building Regulations 2022 - £2000 per premises price cap

If a full gigabit fibre service can be delivered to your site for less than £2000 per premises, then our standard leased lines will provide the backhaul and we will work with you to install gigabit infrastructure around your site.

If the costs of gigabit fibre exceeds £2000 per premises, we can advise on how the development is gigabit ready and we will provide the next fastest connection via cable, satellite or terrestrial radio.

We help developers at an early stage with a 'connectivity plan', in line with best practice.

At a later stage, we help developers achieve requirement RA1 from individual premises to a "Network Distribution Point". Subject to the £2000 per premises cap we help developers achieve requirement RA2 either with a leased line or the "next fastest connection".
